(C) Acoustic

Acoustics: AcoFelt PET felt contributes to good acoustics in any room.

The acoustic panels have a sound dampening effect when you attach them to a wall or a ceiling. In addition, it is quick and easy to install. PET felt absorbs sound and, unlike hard materials, prevents sound from bouncing around the room.

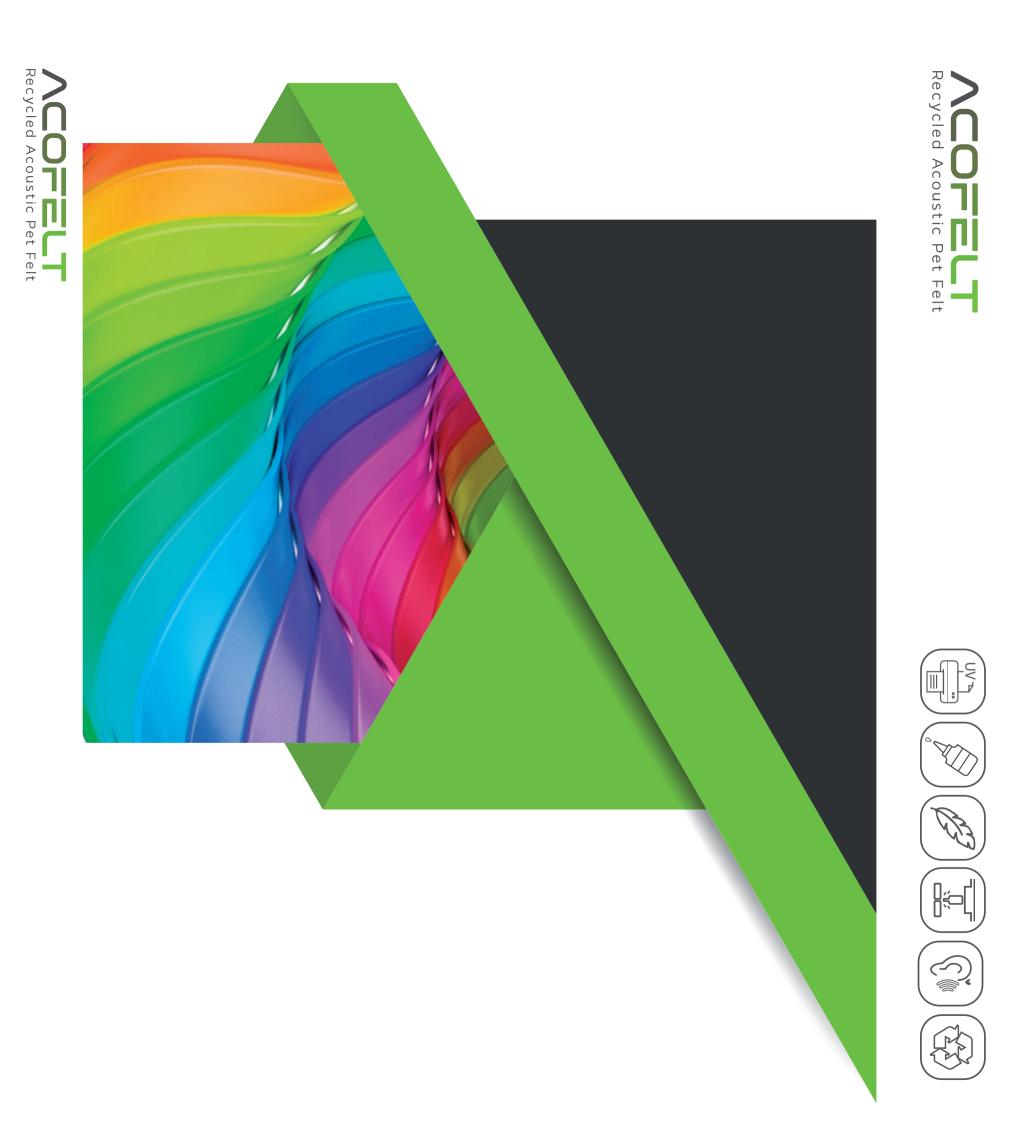

Recycled Pet

Recycled content: AcoFelt panels consist of ± 70% recycled PET fibers. AcoFelt panels are 100% recyclable and contains no chemical components.

Our premium collection has a low carbon footprint due to the factory being based in the Netherlands.

ADJUSTMENTS

UV printable

Printing: By digitally printing our AcoFelt with our UV printer, we add image and colour. This makes it possible to add an additional design element.

Glueable with SOUDAL T-Rex Montage kit

Mounting: This kit is specifically for mounting our AcoFelt panels. This high quality beige coloured kit offers good adhesion and durability for lightweight materials.

One side adhesive

Mounting: If desired, we have the capability to make one side adhesive, allowing it to securely attach to various surfaces.

Lightweight

Density: With a density of 1900 gr/m² (Standard) and 2000 gr/m² (Premium), AcoFelt is very light. Which makes it easy to assemble.

Cuttable with Zünd and Summa

Digital cutting: With our Zünd digital CNC cutting machine, we can cut almost any pattern, design or logo. So we can cut through and through, beveled and rounded corners. And we can cut patterns using a V-Cut.
